

Ostinato™ Laminated Glass - Allegretto Wood Veneers

Made Proudly in the USA

Ostinato™ Allegretto offers a little more tailored approach to laminating wood veneers into glass. - Still using the Ostinato™ method of lamination, utilizing only one sheet of glass on the surface layer of the composition, we open the wood selection up to include almost any Natural Wood Veneer and any Coimposite Veneer Pattern.

The only Wood Veneer material not available under the Allegretto collection is the Dyed Natural Veneers. Those are only available in our Vivente™ lamination.

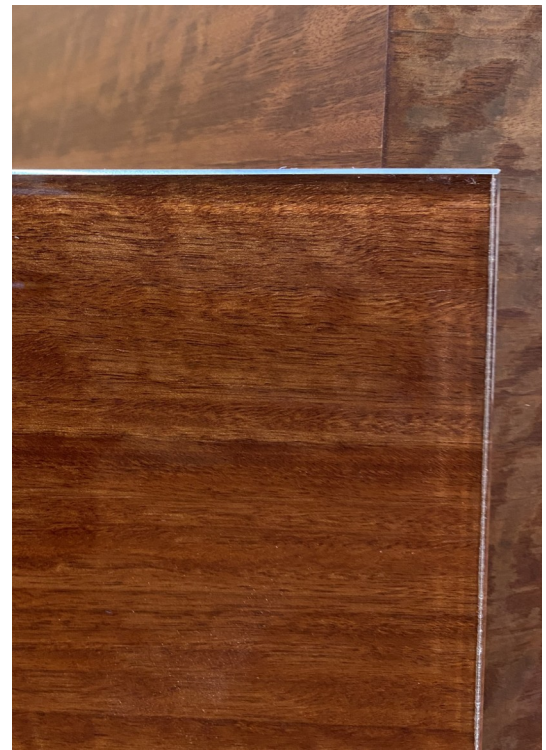

The grade of veneer in the Allegretto collection is of an A to AB grade, which is higher than the industrial grade of Allegro “quick ship veneers.”

We will select the flitches for use based upon your elevations, and will allow for the specification of exact slicing method - flat sliced, quartered or rift for example. We will also allow for the control over how the veneer leaves are matched, for example book match or slip match; and we will maintain sequential material over each elevation.

In addition to the laminated glass, we can have Brogan Wood Products attach the glass to a more rigid substrate and provide it ready to install on standard Z clips by your millworker.
