

Ostinato™ Laminated Glass

Ostinato™ laminated glass consists of only one layer of glass, providing significant advantages over regular two sided laminated glass for one-sided applications.

Still produced in an autoclave, this patented composition is 30% stronger on impact before it fractures than conventional laminated glass with two glass layers of the same thickness.

Low Iron, Standard Glass, Acid Etched, Non-reflective and even patterned glass can be used as the top layer.

Most of our material interlayers are interchangeable with both lamination processes, Vivente™ and Ostinato™. The overall thickness of the composition will vary depending on use, but for most applications we are producing at +/- 1/4" thick. The overall Size will vary depending on how the product is being used.

Left picture shows front surface detail using low iron glass with with Walnut wood veneer interlayer.

Picture below shows back surface detail with aluminum.

Additional information continued on the next page of this PDF.

Continued information for Ostinato™ Laminated Glass

- Optional Carbon Fiber embedded interlayer element can be added to surpass most stringent ANSI and CPSC impact requirements for laminated glass
- Lighter thinner construction of glass wall panels and table top glass laminated with a large variety of decorative materials including wood veneer, fabrics, meshes and papers
- Combine any Ostinato™ designs back-to-back to create a two-sided laminated glass partition within one frame.
- Corrosion-resistant 99% aluminum rear surface is perfect for attachment to various primed surfaces using commonly available adhesives and tapes
- Ostinato™ annealed laminated glass panels can be safely and easily cut and drilled, just like regular glass, without the use of special equipment and skill
- Polymeric chemical-resistant rear surface in place of aluminum is a thinner translucent alternative to regular laminated cabinet glass and glass closet doors, as well as wall artwork installed with the use of standoffs

Ostinato™ allows for more cost-effective production with tempered glass, since it requires pre-fabrication of only one glass panel.

As an additional service, through sister company Brogan Wood Products, we are able to take our Ostinato™ Laminated Glass panels and attach them to a more rigid substrate like MDF or PBC, even Melamine covered core material. This allows a millworker or glazer to simply install panels on Z clips just like any other standard panel product. All of which is warrantied.

As shown in the photo to the right, Ostinato™ Portoro Select, Black and Gold Royal Paper. 1/4" Composition on Black melamine PBC.
