

Vivente™ Laminated Glass using Wood Veneers

Having a Wood Veneer company as a sister company, Intermezzo LLC is able to offer an array of wood veneers laminated in glass, unobtainable by other glass companies. We can offer you laminated Natural Veneers, Dyed Natural Veneers, Composites and other specialties.

Our laminated glass products are found in elevator cabs, as paneled wall elevations of glass and even as glass panels within sequenced sets of veneered millwork panels and doors. Our process of lamination is patented and unique within our industry.

What differentiates us from our competitors is the ability to marry the use of one material element, in this case wood veneer, with our production of goods and different design elements for the same job.

As shown above, a dyed natural walnut veneer in 3/8" low iron, non-reflective glass over low iron mirror
