

## Vivente™ Laminated Glass - Metal Mesh

One of the many materials we laminate into glass is decorative Metal Mesh “Fabric.” Working direct with several different manufacturers of this material, we offer a wide and varied range of unique visual aesthetics.

The mesh is produced in rolls approximately 59” in width. Therefore, depending on the pattern, you could conceivably produce a panel at 50” wide. In terms of length, our maximum with this material is 126”. Depending on how you want to use the glass, we will help determine the best thickness relative to the overall size of each panel.

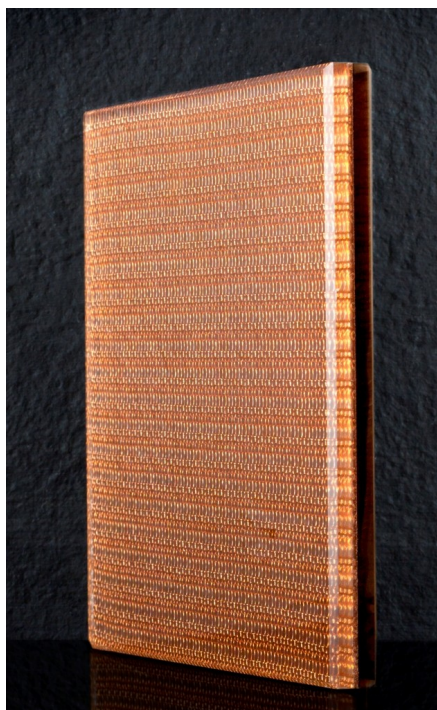

Examples showing some of our Metal Mesh laminated are below.

DuMarie Silver in 1/2” Low Iron,  
Semi Transparent

Bronze 103 over Bronze Mirror,  
1/2” Composition
